

# IronSpire JobSite™ / PrimeSite™

IronSpire JobSite™ and PrimeSite are web-based collaboration solutions used to manage information and improve the communication among project teams. All project documents and communications are maintained on a secure, universal platform, facilitating tighter communication, increased accountability, and the creation of an audit trail.

Benefits experienced by IronSpire customers:

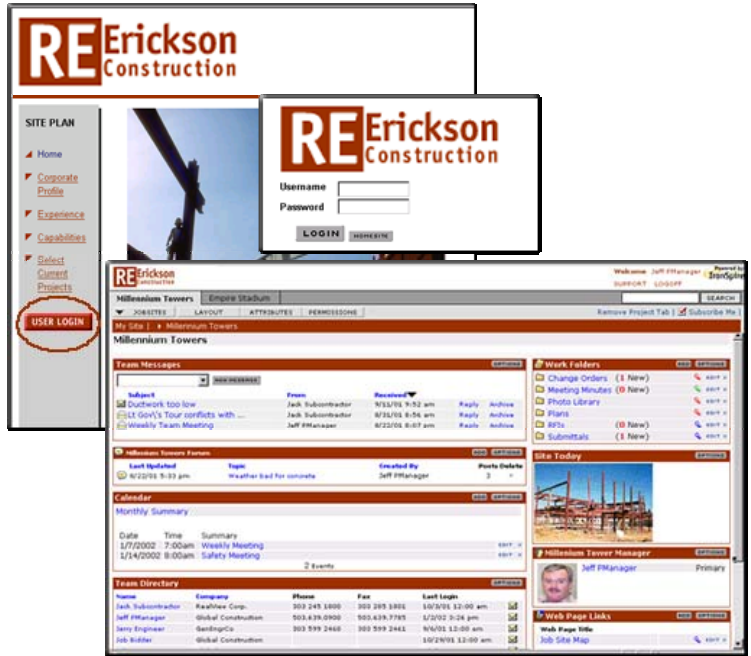

- Rapid return on investment
- Decreased mistakes
- Significant improvement in RFI turnaround time
- Elimination of many administrative tasks
- More productive and tightly controlled relationship with subcontractors
- Competitive advantage for customers when bidding for new jobs

## How it Works

IronSpire JobSite is accessed via the Internet, where the entire team conducts its business within a secure project website. There, according to their security permissions, team members can view and redline drawings, manage documents, conduct a discussion or send a message.

- Team members are automatically notified via email when there is something that requires their action, adding a layer of accountability and accelerating the review process.
- Project managers have control over how documents are managed, who reviews them, and how information is displayed.
- All decisions, discussions and activities are recorded for later reference.
- Some of the types of documents managed are: bids, submittals, change orders, RFIs, meeting minutes, and progress photos.

- **Projects tailored to map to your processes and needs**
- **Compatible with other applications**
- **"Zero training" needed**
- **No special IT staff required**
- **Be up and running in 48 hours**

**Make IronSpire PrimeSite your tool, used your way. Users login from your company's web page, and all forms are customized to support your company's unique data capture needs.**

## Benefits of IronSpire

IronSpire offers an immediate solution that does not require developers, owners and contractors to change the way they work. JobSite has been designed with the flexibility to map quickly to the processes used by an individual customer. Project managers dictate how the web site is structured, the terminology used and the way documents are routed and managed.

JobSite/PrimeSite's patent-pending X-tensible Document Management technology allows customers to customize what data is collected and how that information is displayed and managed.

## Compatibility

IronSpire is compatible with other applications, such as scheduling or accounting/estimating software, by making the reports viewable to the entire team. IronSpire's patent-pending X-tensible Document Management technology enables data-level integration for data transfer between applications. For example, information from a change order on IronSpire can be imported into a back-end accounting system.

## Training and Implementation

"**Zero training**" was a key design requirement for JobSite. It's ease of use encourages rapid adoption by the entire project team, providing increased effectiveness and productivity for all team members. Standard conventions and features such as drag-and-drop streamline workflows to a few mouse clicks.

JobSite projects can be up and running within 48 hours. An IronSpire representative, with construction experience, consults with the project manager to determine work practices and then tailors IronSpire JobSite to match those processes.

Once the project manager decides how the project is to be set up, the rest of the team is issued log-ins and passwords. No training is required. Team members get a notification via email that invites them into the project. A click on the notification's link brings them to the sign-in page and then to the project dashboard.

## Human Resources Requirements

No special IT staff is required to set-up or maintain JobSite. IronSpire handles registration, implementation, training, and all upgrades.

All users are welcome to take advantage of the following customer support options:

- Unlimited calling to our customer support Help Desk.
- Online "Ask the JobSite Expert".
- An online user forum where users can post questions and tips.

## Technical Requirements

No special hardware or software is needed to take advantage of IronSpire JobSite's collaboration features. Minimum requirements are:

- Internet Explorer 5.0 or higher
- Internet connection

## Cost

IronSpire offers two types of licenses:

- JobSite is a project-based solution offered on a monthly basis. No initial investment makes it a low-risk way to try online collaboration. Customers are billed monthly for each active user license.
- PrimeSite is an annual enterprise solution that becomes the customer's own, branded web-based collaboration system. Users login from the customer's web page, and the project sites mimic the look and feel of the customer's graphical image, colors, and logo. All forms are customized to support an individual customer's established operating procedures.

Both JobSite and PrimeSite licenses are available through IronSpire's Authorized Solution Providers. To contact an IronSpire representative in your area visit our locator at [www.ironspire.com/partners/index.htm](http://www.ironspire.com/partners/index.htm), or call 503-639-0900 x 5.

*Transferring documents in this manner is a new concept for several of my team members. Some of them were able to use IronSpire JobSite with minimal training, and others have needed a little more assistance. When we have needed some assistance, IronSpire's staff was extremely prompt, courteous, and knowledgeable. To date their customer service has been exemplary, and I'm not surprised; one of the reasons I chose IronSpire was because of the partnership-type attitude they have with their customers.*

~ **Randy Harrison,**  
**Superintendent,**  
**D.L. Withers**

*JobSite has given me a jump on the competition by streamlining my operation with the power of the web. All in all, the results are clear. We are saving money and time for our owners and ourselves. To date it has easily been a 10x return on my investment.*

~ **David Andersen,**  
**President Andersen**  
**Construction**

*"I ran another small project out here, and I suggested that we use IronSpire, but the architect was old school and wouldn't allow it. The subcontractors who were already using IronSpire complained that it would have been much easier if they had used IronSpire on that one".*

~ **Project Manager,**  
**Danda Construction**
